ABSTRACT

Abstract goes here

Subject headings: Catalogs; Fermi Gamma-ray Space Telescope; Gamma rays: observations; pulsar wind nebula

*Todo list

1. Introduction

The introduction goes here…

Primary motivations for improved analysis

- More data (3 years vs 18 months)

- Many new GeV pulsars
- Hope to find new PWN in the off-peak emission of LAT-detected GeV Pulsars.
- Going to higher energies thanks to improved IRFs.
- Better spatial/morphological analysis due to new `pointlike` code.

2. LAT Description and Observations

Description goes here. . .

We used the same data set as that used in the second *Fermi*-LAT pulsar catalog. In particular, this data set spans 3 years from XXXXXXto XXXXXX.

Start Date

End Date

3. Timing Analysis

Timing analysis goes here. . .

4. Off-peak Phase Selection

To study the off-peak emission of LAT-detected pulsars, we first developed a new method for defining the off-peak emission. The primary constraint for this method was that it was systematic, computationally efficient and model independent, and that it correctly removed the pulsed emission for already studied pulsars.

The method we developed is

- First, deconstruct the pulsar phaseogram using a Bayseian blocks representation of the data.
  - Figure 1 shows the off peak selection for some pulsars. . .
  - Set the ncpPrior parameter to 5
- Before beinning the data, first rotate the maximum phase range to 0 so that the off-peak region will not overlap the phase edge.
-

required first representing the

THe off peak phase range is defined in Table 1.

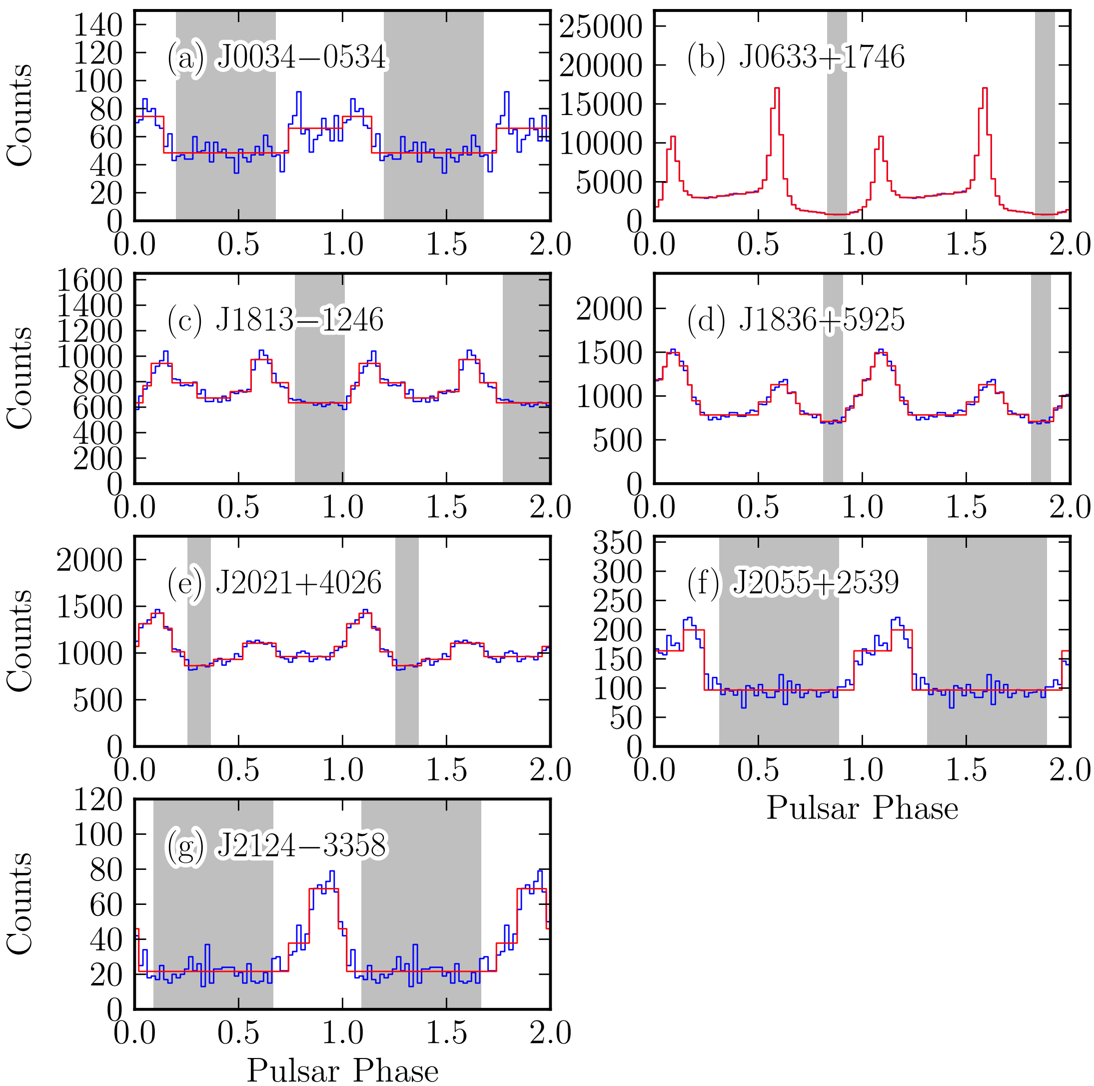

Fig. 1.— Off peak selection for some pulsars…

Table 1. Timing Observatories, definition of the off-peak region, and pulsar distances.

5. Analysis of the *Fermi*-LAT data

Methods for data analysis

- Cut on pulsar phase
- Perform localization or extension fitting using `gtlike` using energies from 1 GeV to 316 GeV.
- Perform spectral analysis using `gtlike` for energies above 100 MeV to 316 GeV.
- There is a detection if TS > 25 in the point-like source hypothesis after fitting the position of the point-like source.
- Consider the source to be extended if $\mathrm{TS}_{\mathrm{ext}} > 16$. Similar to extended source search paper .

cite extended source search paper

- Calculate $\mathrm{TS}_{\mathrm{cutoff}}$ for all energies.

When to consider the source a pulsar or PWN.

- If extended, then it is a PWN (cannot be a pulsar)
- If it is significiant for $E > 10$ GeV, it is a PWN (too hard to be a pulsar)
- Otherwise, if it has a cutoff, it is a Pulsar candidate
- For point-like emission that is not significantly cutoff, the emission mechanism is uncertain.

6. Results

Results goes here...

Table 2 shows the results of the all energy analysis of the off-peak emission for each pulsar.

Table 3 shows the results of the analysis in separate energy bins of each pulsar.

Table 4 shows the results of the cutoff test for pulsars with significant low-energy emission.

Table 2. All Energy spectral fit for the

7. Discussion

The discussion goes here...

The *Fermi* LAT Collaboration acknowledges generous ongoing support from a number of agencies and institutes that have supported both the development and the operation of the LAT as well as scientific data analysis. These include the National Aeronautics and Space Administration and the Department of Energy in the United States, the Commissariat à l'Energie Atomique and the Centre National de la Recherche Scientifique / Institut National de Physique Nucléaire et de Physique des Particules in France, the Agenzia Spaziale Italiana and the Istituto Nazionale di Fisica Nucleare in Italy, the Ministry of Education, Culture, Sports, Science and Technology (MEXT), High Energy Accelerator Research Organization (KEK) and Japan Aerospace Exploration Agency (JAXA) in Japan, and the K. A. Wallenberg Foundation, the Swedish Research Council and the Swedish National Space Board in Sweden.

Additional support for science analysis during the operations phase is gratefully acknowledged from the Istituto Nazionale di Astrofisica in Italy and the Centre National d'Études Spatiales in France.

The authors acknowledge the use of HEALPix[1] (Górski et al. 2005).
