4	Abstract goes here
5	Subject headings: Catalogs; Fermi Gamma-ray Space Telescope; Gamma rays: observations; pulsar wind nebula
7	Figures are in color
8	1. Introduction
9	The introduction goes here
10	Primary motivations for improved analysis
11	• More data (3 years vs 18 months)
12	• Many new GeV pulsars
13	• Going to higher energies thanks to improved IRFs.
14	• Better spatial/morphological analysis due to new pointlike code.
15	2. LAT Description and Observations

The discussion goes here...

The Fermi LAT Collaboration acknowledges generous ongoing support from a number 27 of agencies and institutes that have supported both the development and the operation of the 28 LAT as well as scientific data analysis. These include the National Aeronautics and Space Administration and the Department of Energy in the United States, the Commissariat à 30 l'Energie Atomique and the Centre National de la Recherche Scientifique / Institut National 31 de Physique Nucléaire et de Physique des Particules in France, the Agenzia Spaziale Italiana 32 and the Istituto Nazionale di Fisica Nucleare in Italy, the Ministry of Education, Culture, 33 Sports, Science and Technology (MEXT), High Energy Accelerator Research Organization (KEK) and Japan Aerospace Exploration Agency (JAXA) in Japan, and the K. A. Wallenberg Foundation, the Swedish Research Council and the Swedish National Space Board in Sweden. 37

Additional support for science analysis during the operations phase is gratefully acknowledged from the Istituto Nazionale di Astrofisica in Italy and the Centre National d'Études
40 Spatiales in France.

The authors acknowledge the use of HEALPix<sup>1</sup> (Górski et al. 2005).
